

San Jose Master Bath Remodel

2009 Remodelers Awards
Category 2-D

What was once a confined corner has been made into a serene setting complete with a luxurious, deep soaking tub. The tub is saturated in octagon shaped stone tiles with a mosaic accent band as a border, which wraps around to the side of the cozy storage and candle setting area. The tub valves, which include a pull-out wand, are conveniently located at the lay down side of the tub to allow for easy adjustment of water temperature without having to get up. A great haven after a long day!

While making the most of this space, this well-designed shower is both elegant and practical. The shower is complete with seamless glass doors, octagon shaped stone floors, stone walls with built-in niches and a sitting bench. Although there are four different varieties of tile in the shower, the mosaic design is the elaborate focal point. Also featured is a multi-functional shower valve with a rain head and shower head. In this space showering will feel more like a luxury than a necessity.

This before cramped bathroom was restructured to incorporate his and her vanities mirroring each other, a separate shower and a deep soaking tub. The solid wood vanities house repurposed lighting, faucets and sinks, a Silestone top and two spacious towers great for appeal and storage. The tower doors offer a unique design made of frosted glass and accent metal. Finishing touches include new crown molding and trim and added pocket doors for privacy.
